

Release Notes Simple Weather Bloc version 2.0

Important note

The data source used in version 1.0 has stopped working. It has been the major motivation to find a new source and to write version 2.0 of the module. The way the new data source is implemented has led in rewriting more than 50% of the code of the V1.0. Thus, the few bugs you may have encountered in version 1.0 have disappeared, simply because the source code associated to them has disappeared.

Corrected bugs

1. Miscellaneous typos in English translations

Added features

1. New weather data source
2. Possibility to display up to 4 independent weather blocks
3. Extended admin interface to manage the 4 blocks

Removed features

1. Unfortunately, the new data source does not provide as much information as the previous one. We loose visibility, barometer and the UV index. If you know a data source (web service) with these data, please tell the author.
